SUMMARY

Senior Software Engineer with 5+ years building fullstack web applications in TypeScript, Node.js, and React. Delivers APIs, integrations, asynchronous processing, and microservices with CI/CD. Integrates AI-driven agentic workflows into daily engineering.

SKILLS

Languages and fullstack: TypeScript | JavaScript | Node.js | React | Go
Backend and architecture: APIs | OpenAPI/Swagger | Express | Koa | microservices
Data and messaging: PostgreSQL | DynamoDB | Redis | BullMQ | RabbitMQ | AMQP
Quality and delivery: CI/CD | Vitest | Jest | Docker | Kubernetes | ArgoCD
Cloud and operations: AWS | GCP | Datadog | LaunchDarkly | OpenFeature | Auth0
AI tools: Claude Code | Codex | Agentic workflows

EXPERIENCE

DexCare <i>Senior Software Engineer</i>	Jan 2026 - Present <i>Remote</i>
• Deliver real-time visit booking and provider availability by building event-driven TypeScript services on Node.js with Express and Koa. • Reduce authentication friction by 25% by isolating tenant data and validating contracts with Auth0 JWT and OpenAPI/Swagger on multi-tenant APIs. • Serve booking reads and writes by modeling data in PostgreSQL with Sequelize and Drizzle ORM, DynamoDB Streams, and Redis. • Reduce wrong bookings by 15% by synchronizing bookable slots through integrations between the scheduling platform and Epic EMR. • Enable AI tools to produce testable, high-quality code in daily engineering by building Claude Code and Codex environments with shared rules, lint enforcement, cyclomatic complexity limits, and tests. • Reduce release risk by 7% by shipping behind LaunchDarkly/OpenFeature flags and monitoring React with Datadog RUM. • Reduce new-client pilot friction by 33% by helping implement shared service instances with isolated configuration, secrets, and data stores.	
Luizalabs <i>Mid-level Software Engineer</i>	Jan 2024 - Jan 2026 <i>Remote</i>
• Deliver electronic invoice issuing for Magazine Luiza's e-commerce operation by building distributed tax microservices in Java and Go. • Improve invoice processing throughput by 20% and fault tolerance by moving SEFAZ communication to asynchronous BullMQ queues. • Keep services reliable in production by deploying with Docker and Kubernetes on GCP through ArgoCD, with Vitest and Jest suites gating CI/CD. • Cut support tickets by 18% by building back-office dashboards that gave operations visibility into fiscal workflows.	
Lippaus Distribuidora <i>Mid-level Software Engineer</i>	Jan 2023 - Jan 2024 <i>Remote</i>
• Support nationwide retailer expansion by building a multi-tenant web and mobile platform on PostgreSQL. • Increase processing capacity by 26% for orders, notifications, and integrations by implementing asynchronous BullMQ jobs. • Turn customer requirements into delivered solutions by leading project scoping and stakeholder communication.	
Lippaus Distribuidora <i>Entry-level Fullstack Software Engineer</i>	Mar 2021 - Jan 2023 <i>Remote</i>
• Support operational and administrative workflows for a beverage distribution startup by developing internal back-office dashboards in JavaScript. • Deliver customer-facing features end to end by balancing business requirements with technical constraints.	

EDUCATION

FAESA <i>Bachelor's degree, Information Systems</i>	Feb 2022 - Dec 2025 <i>Vitória, ES, Brazil</i>
