SUMMARY

AI-native Senior Software Engineer with 5+ years in product engineering, delivering outcome-driven full stack TypeScript systems and measurable product outcomes. Uses Claude Code and Codex daily, builds event-driven healthcare scheduling and multi-tenant APIs on AWS, and works in Advanced/C1 English.

SKILLS

AI agents and quality: Claude Code | Codex | Agentic workflows | Vitest | Jest

Languages and frontend: TypeScript | JavaScript | Node.js | React | React Native | Go

Backend and data: Express | Koa | REST APIs | OpenAPI/Swagger | PostgreSQL | DynamoDB | Redis | Drizzle ORM | Sequelize | BullMQ

Cloud and observability: AWS | Datadog | GCP | Docker | Kubernetes | ArgoCD | CI/CD | LaunchDarkly | OpenFeature | Auth0

EXPERIENCE

DexCare

Jan 2026 - Present

Senior Software Engineer

Remote

- Enable AI coding agents to ship production-ready code in daily production work by building reusable Claude Code and Codex agent workflows with guardrails: shared rules, lint enforcement, cyclomatic complexity limits, and tests.
- Improve a booking-quality metric by reducing wrong bookings by 15% through Epic EMR time-slot flows that keep bookable slots synced with hospital records.
- Lower release risk by 7% through a controlled rollout of React changes behind LaunchDarkly/OpenFeature flags with Datadog RUM observability.
- Deliver visit booking and provider availability by building an event-driven architecture with TypeScript and Node.js services on Express and Koa.
- Strengthen security and reduce authentication friction by 25% by enforcing Auth0 JWT, tenant isolation, and OpenAPI/Swagger contracts on multi-tenant REST APIs.
- Serve booking reads and writes by building a PostgreSQL data model with Sequelize and Drizzle ORM, DynamoDB Streams, and Redis, wired to S3 and RDS through AWS SDK v3.
- Cut new-client pilot friction by 33% by helping implement the Shared Platform Initiative (SPI), replacing per-customer environments with shared service instances and isolated configuration, secrets, and data stores.

Luizalabs

Jan 2024 - Jan 2026

Mid-level Software Engineer

Remote

- Delivered electronic invoice issuing for Magazine Luiza's e-commerce operation by building distributed tax microservices in Node.js, Java, and Go.
- Improved invoice-processing performance and throughput by 20% by moving SEFAZ communication to fault-tolerant asynchronous BullMQ queues.
- Cut support tickets by 18% and gave operations visibility into fiscal workflows by building back-office dashboards on tax microservices.
- Kept services production-ready by deploying with Docker and Kubernetes on GCP through ArgoCD, with Vitest and Jest suites gating CI/CD.

Lippaus Distribuidora

Jan 2023 - Jan 2024

Mid-level Software Engineer

Remote

- Turned customer requirements into delivered solutions by leading project scoping and stakeholder communication.
- Built a multi-tenant web and mobile platform by using React Native and PostgreSQL.
- Increased processing capacity by 26% for high-volume orders, notifications, and integrations through asynchronous BullMQ jobs.

Lippaus Distribuidora

Mar 2021 - Jan 2023

Entry-level Fullstack Software Engineer

Remote

- Delivered customer-facing features end to end by balancing business requirements with technical constraints.
- Supported operational and administrative workflows by developing internal back-office dashboards in JavaScript.

EDUCATION

FAESA

Feb 2022 - Dec 2025

Bachelor's degree, Information Systems

Vitória, ES, Brazil
