SUMMARY

Senior Software Engineer with 5+ years building production web systems with TypeScript, JavaScript, React, Node.js, and Go. Delivers reliable healthcare scheduling interfaces and multi-tenant REST APIs on AWS. Uses advanced English (C1) daily with US teams. Integrates AI-driven agentic workflows into daily delivery.

SKILLS

Languages: TypeScript | JavaScript | Node.js | Go
Frontend: React
Backend and APIs: Express | Koa | REST APIs | OpenAPI/Swagger | BullMQ | RabbitMQ | AMQP
Data: PostgreSQL | DynamoDB | Redis | Drizzle ORM | Sequelize
Cloud and operations: AWS | GCP | Docker | Kubernetes | ArgoCD | CI/CD | Datadog | LaunchDarkly | OpenFeature | Auth0
Testing and AI tooling: Vitest | Jest | Claude Code | Codex | Agentic workflows

EXPERIENCE

DexCare <i>Senior Software Engineer</i>	Jan 2026 - Present <i>Remote</i>
• Deliver reliable real-time visit booking and provider availability for a healthcare scheduling platform by building event-driven TypeScript services on Express and Koa. • Keep bookable slots synced with hospital records and reduce wrong bookings by 15% by integrating Epic EMR time-slot flows. • Isolate tenant data, enforce API contracts, and reduce authentication friction by 25% using Auth0 JWT and OpenAPI/Swagger validation on multi-tenant REST APIs. • Serve booking reads and writes by modeling data in PostgreSQL with Sequelize and Drizzle ORM, DynamoDB Streams, and Redis, wired to S3 and RDS through AWS SDK v3. • Reduce release risk by 7% by shipping React updates behind LaunchDarkly/OpenFeature flags and monitoring them with Datadog RUM. • Enable agentic workflows to produce high-quality code in daily delivery by building Claude Code and Codex environments with shared rules, lint enforcement, cyclomatic complexity limits, and tests. • Reduce new-client pilot friction by 33% by helping implement the Shared Platform Initiative (SPI), replacing per-customer environments with shared service instances and isolated configuration, secrets, and data stores.	
Luizalabs <i>Mid-level Software Engineer</i>	Jan 2024 - Jan 2026 <i>Remote</i>
• Delivered electronic invoice issuing for Magazine Luiza's e-commerce operation by building distributed tax microservices in Node.js, Java, and Go. • Improved invoice throughput by 20% and fault tolerance by moving SEFAZ communication to asynchronous BullMQ queues. • Gave operations visibility into fiscal workflows and cut support tickets by 18% by building back-office dashboards on tax microservices. • Kept services reliable in production by deploying with Docker and Kubernetes on GCP through ArgoCD, with Vitest and Jest suites gating CI/CD.	
Lippaus Distribuidora <i>Mid-level Software Engineer</i>	Jan 2023 - Jan 2024 <i>Vitória, ES, Brazil</i>
• Supported nationwide retailer expansion by building a multi-tenant web and mobile platform on PostgreSQL. • Handled high-volume orders, notifications, and integrations with 26% more processing capacity through asynchronous BullMQ jobs. • Turned customer requirements into delivered solutions by leading project scoping and stakeholder communication.	
Lippaus Distribuidora <i>Entry-level Fullstack Software Engineer</i>	Mar 2021 - Jan 2023 <i>Vitória, ES, Brazil</i>
• Supported operational and administrative workflows of a beverage distribution startup by developing internal back-office dashboards in JavaScript. • Delivered customer-facing features end to end by balancing business requirements with technical constraints.	

EDUCATION

FAESA <i>Bachelor's degree, Information Systems</i>	Feb 2022 - Dec 2025 <i>Vitória, ES, Brazil</i>
