SUMMARY

I am a Senior Software Engineer with 5+ years of professional software engineering experience building full stack systems with React, TypeScript, Node.js, and Go. I build REST APIs, web applications, and AWS cloud services for healthcare scheduling. I integrate AI-driven agentic workflows into daily software delivery.

SKILLS

Languages and runtimes: JavaScript/TypeScript | Node.js | Go | Java

Frontend and applications: React | Web applications | Back-office dashboards

Backend and APIs: REST APIs | Express | Koa | OpenAPI/Swagger | BullMQ | RabbitMQ | AMQP

Cloud and delivery: AWS | Docker | Kubernetes | CI/CD | GCP | ArgoCD | Datadog | LaunchDarkly | OpenFeature

Data: SQL | PostgreSQL | DynamoDB | Redis | Drizzle ORM | Sequelize

Testing and AI: Vitest | Jest | Auth0 | Claude Code | Codex | Agentic workflows

EXPERIENCE

DexCare

Jan 2026 - Present

Senior Software Engineer

Remote

- Built healthcare scheduling workflows that delivered real-time booking and provider availability by developing event-driven TypeScript services on Express and Koa.
- Integrated Epic EMR time-slot flows that kept bookable slots synced with hospital records and reduced wrong bookings by 15%.
- Built multi-tenant REST APIs with Auth0 JWT and OpenAPI/Swagger validation that isolated tenant data, enforced API contracts, and reduced authentication friction by 25%.
- Built SQL-backed booking flows that connected application data to cloud services by modeling reads and writes in PostgreSQL with Sequelize and Drizzle ORM, DynamoDB Streams, Redis, and AWS SDK v3.
- Reduced release risk by 7% by shipping behind LaunchDarkly/OpenFeature flags and monitoring React with Datadog RUM.
- Built AI-assisted delivery environments with Claude Code and Codex that produced high-quality code by enforcing shared rules, lint, cyclomatic complexity limits, and tests.
- Helped implement the Shared Platform Initiative (SPI), reducing new-client pilot friction by 33% by replacing per-customer environments with shared service instances and isolated configuration, secrets, and data stores.

Luizalabs

Jan 2024 - Jan 2026

Mid-level Software Engineer

Remote

- Built distributed tax microservices in Node.js, Java, and Go that delivered electronic invoice issuing for Magazine Luiza's e-commerce operation.
- Improved invoice processing throughput by 20% by moving SEFAZ communication to asynchronous BullMQ queues.
- Reduced support tickets by 18% by building back-office dashboards on tax microservices that gave operations visibility into fiscal workflows.
- Kept production deployments reliable by deploying Docker and Kubernetes services on GCP through ArgoCD and gating CI/CD with Vitest and Jest.

Lippaus Distribuidora

Jan 2023 - Jan 2024

Mid-level Software Engineer

Vitória, ES, Brazil

- Built a multi-tenant web and mobile platform on PostgreSQL that supported nationwide retailer expansion.
- Increased order, notification, and integration capacity by 26% by processing asynchronous BullMQ jobs.
- Delivered customer-facing JavaScript features from business requirements by leading project scoping and stakeholder communication.

Lippaus Distribuidora

Mar 2021 - Jan 2023

Entry-level Fullstack Software Engineer

Vitória, ES, Brazil

- Built internal back-office dashboards in JavaScript that supported operational and administrative workflows for a beverage distribution startup.

EDUCATION

FAESA

Feb 2022 - Dec 2025

Bachelor's degree, Information Systems

Vitória, ES, Brazil
