SUMMARY

I am a Senior Software Engineer with 5+ years building TypeScript/Node, React, and Go systems with production ownership. I build event-driven healthcare scheduling, Epic EMR integrations, and multi-tenant APIs on AWS. I previously built Magazine Luiza's electronic-invoicing microservices. I integrate Claude Code and Codex agentic workflows into daily delivery.

SKILLS

Languages: TypeScript | JavaScript | Node.js | Go
Backend: Express | Koa | REST APIs | OpenAPI/Swagger | BullMQ | RabbitMQ | AMQP
Data: PostgreSQL | DynamoDB | Redis | Drizzle ORM | Sequelize
Frontend: React
Cloud and operations: AWS | GCP | Containers | Docker | Kubernetes | ArgoCD | CI/CD | Datadog | LaunchDarkly | OpenFeature | Auth0
Testing and security practices: Test automation | Vitest | Jest | Input validation | Secrets handling
AI tooling: Claude Code | Codex | Agentic workflows | Agent rules and enforcement

LANGUAGE

Portuguese: Native | English: Fluent (C1)

EXPERIENCE

DexCare | Senior Software Engineer

Remote | Mar 2026 - Present

- Built Claude Code and Codex agent environments with shared agent rules and enforcement (lint, cyclomatic complexity limits, and tests) that enabled agentic workflows to produce high-quality code in daily delivery.
- Built event-driven TypeScript services on Express and Koa that delivered real-time visit booking and provider availability for a healthcare scheduling platform.
- Integrated Epic EMR time-slot flows that kept bookable slots synced with hospital records and reduced wrong bookings by 15%.
- Built multi-tenant REST APIs with Auth0 JWT and OpenAPI/Swagger input validation that isolated tenant data, enforced API contracts, and reduced authentication friction by 25%.
- Modeled booking reads and writes in PostgreSQL with Sequelize and Drizzle ORM, DynamoDB Streams, and Redis, wired to S3, RDS, and Secrets Manager through AWS SDK v3 for storage and secrets handling.
- Reduced release risk by 7% by shipping behind LaunchDarkly/OpenFeature flags and monitoring React with Datadog RUM.
- Helped implement the Shared Platform Initiative (SPI), reducing new-client pilot friction by 33% by replacing per-customer environments with shared service instances and isolated configuration, secrets, and data stores.

Luizalabs | Mid-level Software Engineer

Remote | Jan 2024 - Mar 2026

- Built distributed tax microservices in Node.js, Java, and Go that delivered electronic invoice issuing for Magazine Luiza's e-commerce operation.
- Moved SEFAZ communication to asynchronous BullMQ queues, improving invoice throughput by 20% and fault tolerance.
- Built back-office dashboards on tax microservices that gave operations visibility into fiscal workflows and cut support tickets by 18%.
- Deployed services as containers with Docker and Kubernetes on GCP through ArgoCD, keeping production reliable with Vitest and Jest test automation gating CI/CD.

Lippaus Distribuidora | Mid-level Software Engineer

Vitória, ES, Brazil | Jan 2023 - Jan 2024

- Built a multi-tenant web and mobile platform on PostgreSQL that supported nationwide retailer expansion.
- Processed high-volume orders, notifications, and integrations with 26% more capacity through asynchronous BullMQ jobs.
- Led project scoping and stakeholder communication that turned customer requirements into delivered solutions.

Lippaus Distribuidora | Entry-level Fullstack Software Engineer

Vitória, ES, Brazil | Mar 2021 - Jan 2023

- Developed internal back-office dashboards in JavaScript that supported the operational and administrative workflows of a beverage distribution startup.
- Built customer-facing features end to end by balancing business requirements with technical constraints.

EDUCATION

FAESA | Bachelor's degree, Information Systems

Vitória, ES, Brazil | Feb 2022 - Dec 2025
