SUMMARY

I am a Senior Software Engineer with 5+ years building TypeScript, Node.js, React, and Go systems. I build event-driven back-end REST APIs, third-party API integrations, and distributed systems on AWS. I use AI-assisted development and agentic workflows to accelerate daily delivery.

SKILLS

Languages: TypeScript | JavaScript | Node.js | Go

Services: Back-end | third-party API integrations | Express | REST APIs | event-driven | queues | distributed systems | BullMQ

Data and cloud: PostgreSQL | AWS | Docker | GCP | Kubernetes | Redis

Frontend: React

Delivery: testing | AI-assisted development | AI code agents | agentic workflows | Advanced English

EXPERIENCE

DexCare

Senior Software Engineer

Remote

Mar 2026 - Present

- Delivered real-time visit booking and React provider-availability features by building event-driven Back-end services in TypeScript and Node.js on Express.
- Reduced wrong bookings by 15% by building third-party API integrations with Epic EMR that kept bookable time slots synced with hospital records.
- Cut authentication friction by 25% by building multi-tenant REST APIs with Auth0 JWT and OpenAPI/Swagger validation.
- Helped implement the Shared Platform Initiative (SPI), reducing new-client pilot friction by 33% by replacing per-customer environments with shared service instances and isolated configuration, secrets, and data stores.
- Served scheduling reads and writes by modeling data in PostgreSQL, DynamoDB, and Redis through AWS SDK v3.
- Raised code quality in AI-assisted development by building agent environments with shared rules, lint, complexity limits, and testing for validation of AI-generated code from the AI code agents Claude Code and Codex in agentic workflows.
- Collaborated daily with US teams on Koa service delivery by communicating in Advanced English.

Luizalabs

Mid-level Software Engineer

Remote

Jan 2024 - Mar 2026

- Shipped electronic invoice issuing for Magazine Luiza's e-commerce operation by building distributed systems in Go.
- Improved invoice processing throughput by 20% by moving SEFAZ communication to BullMQ queues.
- Kept production services reliable by deploying with Docker and Kubernetes on GCP through ArgoCD, with Vitest and Jest suites gating CI/CD.

Lippaus Distribuidora

Mid-level Software Engineer

Vitória, ES, Brazil

Jan 2023 - Jan 2024

- Enabled nationwide retailer expansion by building a multi-tenant web and mobile platform on PostgreSQL.
- Increased order and notification processing capacity by 26% by moving workloads to asynchronous BullMQ jobs.

Lippaus Distribuidora

Entry-level Fullstack Software Engineer

Vitória, ES, Brazil

Mar 2021 - Jan 2023

- Streamlined operational and administrative processes by building internal back-office dashboards in JavaScript.

EDUCATION

FAESA

Bachelor's degree, Information Systems

Vitória, ES, Brazil

Feb 2022 - Dec 2025
