SUMMARY

I am a Senior Software Engineer with 5+ years building production front-end web applications with TypeScript, Node.js, React, and Go. I build API-driven user interfaces and mature multi-tenant systems for healthcare scheduling. I integrate AI-driven agentic workflows into daily delivery.

SKILLS

Languages: TypeScript | JavaScript | Node.js | Go

Frontend: React | API-driven state management | CSS

Testing: Jest | Vitest

Domain: Electronic invoicing | Healthcare scheduling

Backend and AI tooling: Express | Koa | REST APIs | PostgreSQL | BullMQ | Claude Code | Codex | Agentic workflows

EXPERIENCE

DexCare

Senior Software Engineer

Remote

Mar 2026 - Present

- Delivered real-time booking and provider availability for healthcare scheduling by building web interfaces with API-driven state management backed by TypeScript services.
- Improved shared UI consistency across scheduling surfaces by developing reusable front-end React components with CSS.
- Reduced wrong bookings by 15% by building Epic EMR integrations that kept time slots synchronized with hospital records.
- Reduced authentication friction by 25% by building multi-tenant REST APIs with Auth0 JWT and OpenAPI/Swagger validation.
- Improved release confidence across services by using Jest and Vitest for testing, Datadog for debugging, and lint and complexity limits for code quality.
- Improved daily delivery quality by building agentic workflows with Claude Code and Codex that enforced shared engineering rules.

Luizalabs

Mid-level Software Engineer

Remote

Jan 2024 - Mar 2026

- Delivered electronic invoicing across Magazine Luiza's e-commerce operation by building distributed tax microservices in Node.js and Go.
- Improved invoice processing throughput by 20% by moving SEFAZ communication to asynchronous BullMQ queues.
- Cut support tickets by 18% by building fiscal back-office dashboards in JavaScript for operational visibility.

Lippaus Distribuidora

Mid-level Software Engineer

Vitória, ES, Brazil

Jan 2023 - Jan 2024

- Supported nationwide retailer expansion by building a multi-tenant web and mobile platform on PostgreSQL.
- Increased order and notification processing capacity by 26% by moving workloads to asynchronous BullMQ jobs.

Lippaus Distribuidora

Entry-level Fullstack Software Engineer

Vitória, ES, Brazil

Mar 2021 - Jan 2023

- Supported operational and administrative processes by building internal back-office dashboards in JavaScript.

EDUCATION

FAESA

Bachelor's degree, Information Systems

Vitória, ES, Brazil

Feb 2022 - Dec 2025
