SUMMARY

I am a Senior Software Engineer with 5+ years building JavaScript, TypeScript, Node.js, React, and Go systems. I build event-driven healthcare scheduling, Epic EMR integrations, and multi-tenant APIs on AWS. I run, modify, and test complex codebases locally with Git and Docker, and I previously built Magazine Luiza's electronic-invoicing microservices. I integrate AI-driven agentic workflows into daily delivery.

SKILLS

Languages: JavaScript | TypeScript | Node.js | Go

Backend: Express | Koa | REST APIs | OpenAPI/Swagger | BullMQ | RabbitMQ | AMQP

Data: PostgreSQL | DynamoDB | Redis | Drizzle ORM | Sequelize

Frontend: React

Cloud and operations: Git | Docker | Kubernetes | CI/CD | AWS | GCP | ArgoCD | Datadog | LaunchDarkly | OpenFeature | Auth0

Testing and practices: Unit testing | Vitest | Jest | Complex codebases | Environment setup | Pipeline setup

AI tooling: Claude Code | Codex | Agentic workflows

LANGUAGE

Portuguese: Native | English: Fluent (C1)

EXPERIENCE

DexCare | Mar 2026 - Present

Senior Software Engineer | Remote

- Built event-driven TypeScript services on Express and Koa, versioned in Git, that delivered real-time visit booking and provider availability for a healthcare scheduling platform.
- Integrated Epic EMR time-slot flows that kept bookable slots synced with hospital records and reduced wrong bookings by 15%.
- Built multi-tenant REST APIs with Auth0 JWT and OpenAPI/Swagger validation that isolated tenant data, enforced API contracts, and reduced authentication friction by 25%.
- Modeled booking reads and writes in PostgreSQL with Sequelize and Drizzle ORM, DynamoDB Streams, and Redis, wired to S3 and RDS through AWS SDK v3.
- Reduced release risk by 7% by shipping behind LaunchDarkly/OpenFeature flags and monitoring React with Datadog RUM.
- Built Claude Code and Codex agent environments, a developer tooling layer with shared rules, lint enforcement, cyclomatic complexity limits, and tests, that enabled agentic workflows to produce high-quality code in daily delivery.
- Helped implement the Shared Platform Initiative (SPI) across complex codebases spanning multiple services, reducing new-client pilot friction by 33% by replacing per-customer environments with shared service instances and isolated configuration, secrets, and data stores.

Luizalabs | Jan 2024 - Mar 2026

Mid-level Software Engineer | Remote

- Built distributed tax microservices in Node.js, Java, and Go that delivered electronic invoice issuing for Magazine Luiza's e-commerce operation.
- Moved SEFAZ communication to asynchronous BullMQ queues, improving invoice throughput by 20% and fault tolerance.
- Built back-office dashboards on tax microservices that gave operations visibility into fiscal workflows and cut support tickets by 18%.
- Kept production reliable with Vitest and Jest unit testing gating the CI/CD pipeline setup, by deploying services with Docker and Kubernetes on GCP through ArgoCD.

Lippaus Distribuidora | Jan 2023 - Jan 2024

Mid-level Software Engineer | Vitória, ES, Brazil

- Built a multi-tenant web and mobile platform on PostgreSQL that supported nationwide retailer expansion.
- Processed high-volume orders, notifications, and integrations with 26% more capacity through asynchronous BullMQ jobs.
- Led project scoping and stakeholder communication that turned customer requirements into delivered solutions.

Lippaus Distribuidora | Mar 2021 - Jan 2023

Entry-level Fullstack Software Engineer | Vitória, ES, Brazil

- Developed internal back-office dashboards in JavaScript that supported the operational and administrative workflows of a beverage distribution startup.
- Built customer-facing features end to end by balancing business requirements with technical constraints.

EDUCATION

FAESA | Feb 2022 - Dec 2025

Bachelor's degree, Information Systems | Vitória, ES, Brazil
