SUMMARY

I am a Senior Software Engineer with 5+ years building backend-heavy Go, TypeScript, Node.js, and React systems. I design, ship, and debug backend services for sync and async workloads on AWS: event-driven healthcare scheduling, Epic EMR integrations, and multi-tenant APIs. I previously built Magazine Luiza's electronic-invoicing microservices. I integrate AI-driven agentic workflows into daily delivery.

SKILLS

Languages: Go (Golang) | TypeScript | JavaScript | Node.js

Backend: Backend services | Service-oriented architecture | REST APIs | OpenAPI/Swagger | Express | Koa

Messaging and workloads: RabbitMQ | AMQP | BullMQ | Sync and async workloads

Data: Relational and NoSQL databases | PostgreSQL | DynamoDB | Redis | Drizzle ORM | Sequelize

Frontend: React

Cloud and operations: AWS | GCP | Docker | Kubernetes | ArgoCD | CI/CD | Feature flags | LaunchDarkly | OpenFeature | Auth0

Observability and practices: Datadog | Metrics | Logging | Observability | Performance | Reliability | Scalability | Code reviews

Testing and AI tooling: Vitest | Jest | Claude Code | Codex | Agentic workflows

LANGUAGE

Portuguese: Native | English: Fluent (C1)

EXPERIENCE

DexCare | Mar 2026 - Present

Senior Software Engineer | Remote

- Built event-driven TypeScript backend services on Express and Koa, in a service-oriented architecture for sync and async workloads, that delivered real-time visit booking and provider availability for a healthcare scheduling platform.
- Integrated Epic EMR time-slot flows that kept bookable slots synced with hospital records and reduced wrong bookings by 15%.
- Built multi-tenant REST APIs with Auth0 JWT and OpenAPI/Swagger validation that isolated tenant data, enforced API contracts, and reduced authentication friction by 25%.
- Modeled booking reads and writes across relational and NoSQL databases, PostgreSQL with Sequelize and Drizzle ORM, DynamoDB Streams, and Redis, wired to S3 and RDS through AWS SDK v3.
- Reduced release risk by 7% by shipping behind LaunchDarkly/OpenFeature feature flags and adding observability to React with Datadog RUM metrics and browser logging.
- Built Claude Code and Codex environments with shared rules, lint enforcement, cyclomatic complexity limits, and testing that upheld engineering standards in code reviews and enabled agentic workflows to produce high-quality code in daily delivery.
- Helped implement the Shared Platform Initiative (SPI), reducing new-client pilot friction by 33% and improving platform scalability by replacing per-customer environments with shared service instances and isolated configuration, secrets, and data stores.

Luizalabs | Jan 2024 - Mar 2026

Mid-level Software Engineer | Remote

- Built distributed tax microservices in Go, Node.js, and Java that delivered electronic invoice issuing for Magazine Luiza's e-commerce.
- Moved SEFAZ calls to asynchronous BullMQ queues, raising invoice throughput by 20% and reliability through fault tolerance.
- Built back-office dashboards on tax microservices that gave operations fiscal workflow visibility and cut support tickets by 18%.
- Deployed services with Docker and Kubernetes on GCP via ArgoCD, keeping production reliable with Vitest and Jest tests gating CI/CD.

Lippaus Distribuidora | Jan 2023 - Jan 2024

Mid-level Software Engineer | Vitória, ES, Brazil

- Built a multi-tenant web and mobile platform on PostgreSQL that supported nationwide retailer expansion.
- Improved processing performance for high-volume orders, notifications, and integrations, adding 26% more capacity, by moving the work to asynchronous BullMQ jobs.
- Led project scoping and stakeholder communication that turned customer requirements into delivered solutions.

Lippaus Distribuidora | Mar 2021 - Jan 2023

Entry-level Fullstack Software Engineer | Vitória, ES, Brazil

- Developed internal back-office dashboards in JavaScript that supported the operational and administrative workflows of a beverage distribution startup.
- Built customer-facing features end to end by balancing business requirements with technical constraints.

EDUCATION

FAESA | Feb 2022 - Dec 2025

Bachelor's degree, Information Systems | Vitória, ES, Brazil
